

Meteo-Station for monitoring climatic parameters

Accurate, aviation-proved, versatile... Meteo Station HM30...

The HM30 is a compact, multifunktional measurement tool for climate data.

Various meteo parameters, like Simultaneous display of pressure, humidity, temperature 1 and temperature 2 can be measured and displayed on the device in realtime.

- Datalogger
- Realtimeclock
- HMCS Software

With the optionally available [HMCS Software](#) the measured data can simply be transferred to a pc and be visualized in a graphically attractive way.

The HMCS software allows also to define various alarm points

The functions of the HM30 are completely remote controllable.

Range of functions:

- Air pressure measuring
- Humidity / Temp. 1 (with combined probe)
- Temp. 2 with insertion probe
- Dew point determination
- Altitude
- Differential measurements
- Peak storage (MIN/MAX)
- Hold function
- Zoom function
- RS232 Interface

On request, the HM30 is available **with an internationally acknowledged** SCS calibration certificate for the measured variables of pressure, temperature and humidity!
